

# Move from the dinosaur age to the mobile age

Timescape GeoPunch™ puts time collection devices into the hands of your mobile workforce. Using their own or employer-provided cell phones, smartphones or tablets, employees clock in and out by taking a picture of themselves with their device, with biometric facial recognition technology taking care of the rest. Streamline time data collection, avoid hardware costs and take simplicity to another level. It's a giant leap forward from ancient, on-premise punchclock technology to a truly mobile solution that makes the most of mobile devices and achieves better mobile workforce management!

## WHO

### Biometric Facial Recognition

Say cheese! Employees take a picture of themselves with their cell phone, smartphone, tablet or other device and send it to Payescape. GeoPunch automatically verifies the identity of the employee with hyper-accurate facial recognition algorithms, far superior to fingerprint.

## WHEN

### Accurate, Automatic Time Tracking

GeoPunch Mobile Timestamp technology enables accurate, foolproof and fraud-proof time collection from anywhere. And, it integrates directly with your Timescape Time & Attendance Solution via Open API technology, so time data is delivered seamlessly. Administration becomes more productive, efficient and accurate, and more cost-effective. Buddy-punching, clock rounding and other fraudulent practices are virtually eliminated, with auditing capabilities greatly improved. Compliance is also enhanced with better data and reporting, especially important given the increasing amount of regulations and risk you must ensure you comply with.

## WHERE

### Know Where Your Employees Are

Cutting-edge geolocation technology, including full GPS and cell triangulation, shows you where your employees are. Now you can be assured you have the right employee present at the right time at the right location for the right job. Job and task costing can be implemented as well with short codes used upon clock-in/out, so you get better business intelligence on profitability at a granular level.

## HOW

### Multiple Data Collection Methods

GeoPunch collects data in a way that fits your workforce needs, regardless of device. GeoPunch leverages the universality of mobile devices and puts them to work for your organization.

## PHOTOS

### Remote Photo Collection

Use cell phones to collect pictures associated with the work performed. Photos are automatically associated with the location or task and easily accessible from anywhere via the Internet.

## SIMPLE AND FLEXIBLE TO USE

### GeoPunch Clock-In and Clock-Out

Working with GeoPunch is simple, fast and effective. Employees will find it extremely intuitive since they're using devices and processes they're already familiar with. Managers have access to an In/Out Dashboard showing employee time in or out including a map with their location and photo – all easily accessed from a browser. And payroll administrators will experience easier and more productive paydays, with less rework and better accuracy as things like buddy-punching become obsolete. GeoPunch also enables your organization to instantly expand your TLM system without investing in traditional time clock hardware – time collection devices are already in your workforce's hands!

## HOW GEOPUNCH™ WORKS

1

Employee takes a picture and submits

2

GeoPunch locates employee, verifies identity and logs time

3

Employee receives confirmation
