

# Make Punching In and Out A Snap

## Cloud-based Time and Attendance Panels

Do all of your employees accurately record their time? It's been an age-old problem for decades. Until now. End your time clock reporting worries with Timescape AirClock.

With AirClock, your organization can now integrate a state-of-the-art device to capture employee punches with dual authentication methods – PIN entry and facial recognition. The wall-mounted time and attendance panel decreases employee and manager frustration and increases time collection accuracy. With facial recognition biometrics AirClock removes any potential for employee fraud. The panel software is cloud-based, so simply connect the device to the Internet and power up. It's that easy.

### Easy For Employees To Use

Employees can easily register themselves as users right at the panel. Once registered, they receive a personal identification number (PIN), to use each time they punch in and out.

To record time, employees enter their PIN on the touch screen then stand in the camera crosshairs presented on the screen (see photo). A picture is captured and quickly analyzed with stored biometric templates. If the images match, the punch is recorded. If the images are not a match, the employee receives an on-screen message asking to confirm if they are the user assigned to the PIN that was entered. When they confirm the PIN, the punch is processed and the device records the date and time of the entry. An email is also sent to the supervisor alerting him or her that an employee punched without full biometric authentication. The supervisor then approves or denies the time entry.

### Eliminate Buddy Punching And More

AirClock provides the highest level of security against fraudulent time entry. The dual-authentication process virtually eliminates buddy punching. In addition, organizations can customize the information made available to administrators, supervisors and employees – creating additional security measures and protecting data.

With AirClock, your organization can now integrate a state-of-the-art device to capture employee punches with dual authentication methods – PIN entry and facial recognition.

### Easy Installation

Because of the flexibility of AirClock, the panels can be installed virtually anywhere as long as it is protected from the elements. The device is powered via Power over Ethernet (PoE) and 110v outlet with battery backup. It can transfer data using Ethernet, Wi-Fi or a cellular network.

### AirClock Delivers The Features Organizations Need

Executives constantly face a need to lower the administrative costs of time and labor and payroll administration. One large component of reducing these expenses is eliminating the potential for employee fraud (buddy punching) and clock-rounding. AirClock allows organizations to account for time with pinpoint accuracy and gives decision makers the business intelligence they need to achieve a strong return on investment.

Human Resources and Payroll managers know the importance of time collection systems that integrate into existing payroll systems and AirClock does just that. In addition, it automates workflow and reporting, improving data collection and providing real-time information for all employee work styles – mobile, field level and in-house, so managers can make better informed labor force decisions.

AirClock panels deliver a high-tech solution that any organization will appreciate. Features of the system include:

- 10.1" capacitive touch screen
- 2 MegaPixel front-facing camera
- Wi-Fi and Power Over Ethernet enabled
- Automatic software updates
- Up to 9 hours of battery life
- Front-facing LED illumination technology
- 32 GB hard drive
- One-to-many login functionality

The software allows AirClock to enroll users from any device. Once enrolled, employees can punch in using any AirClock panel. In addition, the system provides:

- Full biometric verification
- Schedule-based punching
- Offline mode
- Supervisor override
- Automatic updates
